

HADHRAMOUT UNIVERSITY
COLLEGE OF ENGINEERING & PETROLEUM
COMPUTER ENGINEERING DEPARTMENT

SOCIAL SERVICES SITE (SERVE ME)

**A FINAL PROJECT SUBMITTED IN PARTIAL FULFILMENT OF THE
REQUIREMENTS FOR THE DEGREE OF BACHELOR OF ENGINEERING IN
COMPUTER ENGINEERING**

By

BADER ESMAIL OMAR BAHESHWAN
ABDOLRHMAN RABE'A AWED BIN OBEEDALLAH
ABDULLAH MOHAMMED MUBARAK BIN SAAD
MANAR KHALED SALEH BAKHAIRIBA

SUPERVISOR

WADHAH SAEED SEBTI

AL MUKALLA
MAY 2025

Supervisor Certificate

I certify that the preparation of this project entitled:

" Social Services Site (Service Me) ",

and prepared by:

1. Bader Esmail Omar Baheshwan
2. Abdolrhman Rabe'a Bin Obeedallah
3. Abdullah Mohammed Bin Saad
4. Manar Khaled Bakhairiba

Was made under my supervision at Computer Engineering department in partial fulfillment of the requirements of the degree of Bachelor of Engineering in Computer Engineering.

Signature:

Name: Wadhah Saeed Sebti

Date:

DEDICATION

To whom my heart is happy to meet her

To the garden of love that grows the brightest flowers

My mom

A symbol of manhood and sacrifice

To the one who pushed me to knowledge and in which I became more proud

My dad

To those who are closer to me than my soul

To those who shared my mother's embrace and from whom I derive my pride and
determination

My brothers

To those who made me forget my studies and shared my worries

In remembrance and appreciation

My friends

To this young and mighty scientific edifice

HADHRAMOUT University

I dedicate this humble effort

ACKNOWLEDGEMENTS

We cannot thank you enough and cannot express our full respect and appreciation to :

Wadhah Sebti

Dr: Makarim Bamtarf

Dr. Rasha Bin Thalab

Dr. Ezzat Al Saadi

T. Wafaa Idris

Regarding his help that came toward us, which exceeded all gratitude, and his support that exceeded all gratitude, we can only write to him with some words, which are part of a whole and a little of much of what is within us, and to write down some of what the tongue was unable to say, and the pen was ignorant to write, and words failed to describe.

We can only say to him, may God help you as long as you help others, and you are always in our hearts with goodness and always moving forward With the grace of God Almighty

DECLARATION

We here declare that the work in this project is our own except for quotations and summaries which have been duly acknowledged.

ABSTRACT

Introduction

Electronic platforms for social services provide a great way to save time, effort, and money. Today, consumers can shop, book, and conduct all their transactions from the comfort of their homes.

Many families and individuals struggle with fragmented efforts when searching for services such as event planning or tourism and recreational activities. Service providers also face challenges in showcasing their services and reaching their target audience. The market lacks a dedicated platform that brings both parties together, offering a comprehensive and user-friendly experience to meet these needs while saving the time, effort, and money spent on traditional shopping.

The traditional shopping and booking system was transformed into an electronic system using ASP to receive orders and process them into databases, along with supporting programming languages.

The system contributed to reducing the time and effort spent on traditional marketing while allowing for the retrieval of old transactions. The platform became easily accessible at any time, improving communication between consumers and service providers to address requests efficiently.

CHAPTER 1

INTRODUCTION

1.1 Introduction

With the proliferation of websites aimed at serving different segments of society, booking and purchasing websites have become an excellent way to save time, effort, and money. Today, consumers can shop and make reservations or purchase services from their homes via the internet. Service providers, in turn, can efficiently manage various customer requests.

In this era of rapid advancements, especially in technology and telecommunications, many barriers have been eliminated, significantly reducing time and distance constraints through the advent of the internet. This technological progress has paved the way for economic and commercial transactions between parties that were previously considered distant or faced challenges in communication, particularly in the realm of e-commerce.

Today, consumers can fully conduct their transactions online using electronic devices.

1.2 Problem Statement

Many consumers face challenges related to booking and communicating with service providers. These challenges can be summarized as follows:

- Searching for suitable bookings through physical visits wastes time and money.
- Difficulty in traveling to search for bookings or purchase products.
- Challenges in communication between consumers and service providers to manage orders, leading to wasted time, effort, and money without obtaining the desired service due to the lack of a platform connecting both parties.
- Difficulty for service providers in showcasing products and bookings effectively.

1.3 Objectives

The goal of this project is to provide a variety of social services to different segments of society and enhance and simplify the booking and purchasing process for these segments. By using an electronic platform for social services, the project aims to facilitate the booking and purchasing process between consumers and service providers.

The project objectives are as follows:

1. Provide a comprehensive and reliable electronic platform that enables users to browse and book specialized services in the areas of weddings, graduation parties, tourism, and entertainment, ensuring easy access and a seamless user experience.
2. Empower service providers to showcase and manage their offerings independently, including registration, approval, service publishing, order tracking, and financial statistics.
3. Ensure service quality through a review and approval mechanism conducted by a supervisor, following defined standards and criteria, to ensure the reliability of listings and customer satisfaction.
4. Implement a secure and efficient financial system to manage payments and e-wallets, covering deposit and withdrawal processes and automatic deduction of dues upon order approval.
5. Enhance administrative supervisor capabilities via a comprehensive dashboard to manage content, categories, data, financial operations, and communication with users.

1.4 Project Scope

project is limited to the regions of Al-Ghayl, Al-Shahr, and Mukalla.

The The scope of the project includes the following:

- 1- Develop a web application architecture based on the MVC model using ASP.NET Core: Views (UI), Controllers (logic), and Models (data access).
- 2- Cover key categories (weddings, graduation parties, tourism, and entertainment) with the flexibility to add more in the future.
- 3- User registration and authentication system with three roles: client, service provider, and administrator; includes account management, data updates, and password management.

- 4- Booking and online payment mechanisms through an internal wallet system, with supervised deposit and withdrawal requests.

1.5 Structure of the Project

After we have taken an introduction and overview of our project in this chapter, the rest of the project report is organized as follows. Chapter two addresses a literature survey and an overview of the components used to build the proposed circuit.

Next, chapter three describes the methodology to describe the analysis and design stage, then it addresses the implementation stage and discusses the results. Finally, chapter four introduces the main conclusions and suggested recommendation work of the project.

CHAPTER 2

LITERATURE REVIEW

2.1 Introduction

This chapter presents the previous works related to the project and a description of the main components to build the service project.

2.2 Related Work

Several works share a similar focus with this project. This section highlights some of these works and examines their features.

2.2.1 Shahbandr.com

Shahbandr.com is a platform designed to support business operations by offering a variety of project and task management tools for service providers. It allows businesses to list their services in a way that enhances accessibility and visibility to potential clients. Shahbandr is tailored for professional services across various fields and provides detailed categorization, making it easy for users to locate specific services. Its features include advanced search options, user-friendly navigation, and efficient organization of services, which help users and service providers connect effectively.

Figure 2. 1 Shahbandr.com website

2.2.2 Haraj.com

Haraj.com is a well-known Middle Eastern online marketplace where users can buy, sell, and list services across multiple categories, including automotive, home services, electronics, and more. Haraj enables individual users and businesses to create listings for goods and services, facilitating transactions through an accessible and intuitive platform. The website features robust search, filter, and categorization capabilities, allowing users to quickly find what they need while allowing service providers to reach a broad audience. Haraj's straightforward listing system and widespread popularity make it a significant player in the region's online marketplace.

Figure 2. 2 Haraj.com application

2.2.3 Zafaf.com

Zafaf.com It is a platform for wedding services, and the primary target customers are couples getting married. It provides services related to wedding venues, photographers, caterers, and event planners.

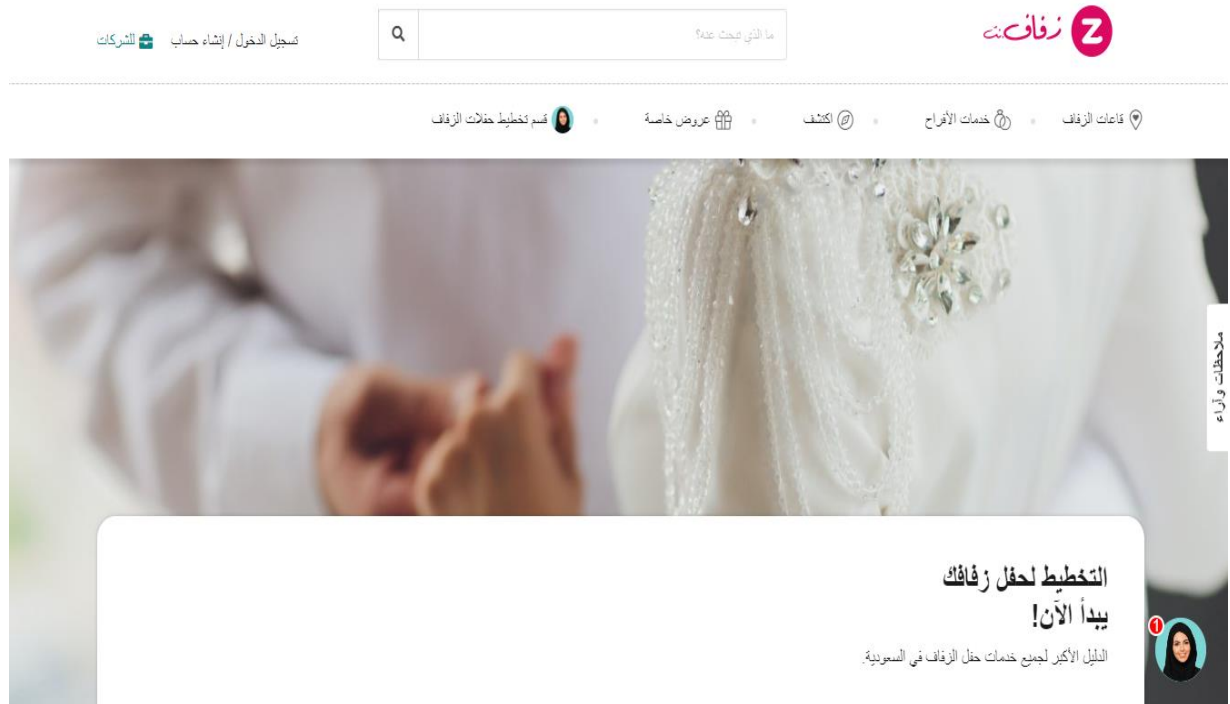

Figure 2. 3 Zafaf.com website

2.2.4 nsqli.com

Nsqli is an online event planner and celebration organizer agency located in Jazan, Saudi Arabia. It provides comprehensive services in wedding planning, venue decoration, arrangements for artists and photographers, and hospitality services.

Figure 2. 4 Nsqli.com website

2.2.5 Ratbli.com

Ratbli is a Saudi-based digital platform and mobile application designed to simplify event planning and organization. It caters to both individuals and businesses, offering a comprehensive suite of services to manage various types of events.

Figure 2. 5 Ratbli.com website

2.3 Background

In this section we will discuss the tools and technologies in general and the ones that are used in the project. This section is split into two inner sections, the front end of the website and the Back end.

2.3.1 Software requirements

Front End

1. HTML

HTML is the standard markup language used to create and structure content on the web. It organizes elements like text, images, and links, providing the foundational structure of a webpage. HTML serves as the skeleton of any website, defining its layout and content organization.

2. CSS

CSS is a Stylesheet Language, used to control the style of the presentation of HTML. It describes the look of the web pages, colors, fonts, layout, and responsive design.

3. JavaScript

JavaScript is a scripting language for the creation of dynamic and interactive web elements. It has allowed the development of functions like form validation, animation, and updating contents on a page without reloading.

4. Bootstrap

Bootstrap is a front-end framework that provides pre-styled components, such as navigation bars, buttons, and grids. It makes it easier for developers to create responsive, mobile-friendly websites fast but consistently. Bootstrap's grid system and design components help to make a professional-looking layout with at least less custom CSS.

5. Pinterest

Pinterest is among the social networking sites used for the discovery of visual inspirations, mostly utilized by creative people. In web design, it could mean a source of inspiration for color schemes, layouts, and UI/UX trends

6. Canva

Canva is a graphic design platform that's very easy to use, letting users create anything from social media posts and presentations to posters and logos.

Back End languages & Frameworks

1. ASP.NET

ASP.NET is an open-source, server-side web application framework developed by Microsoft, designed for building dynamic web pages and web applications. It is part of the broader .NET platform, allowing developers to use a range of languages (primarily C# and VB.NET) to create robust and scalable web applications. ASP.NET has evolved significantly since its initial release, with **ASP.NET Core** now representing the modern, cross-platform version of the framework, tailored to meet the demands of modern web development.

Database management system

1. Microsoft SQL Server

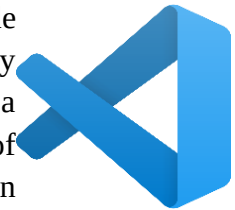

Microsoft SQL Server (MS SQL) is a relational database management system (RDBMS) developed by Microsoft. It is designed to store, manage, and retrieve data as requested by various applications, whether those applications are on the same machine or connected over a network. SQL Server uses Structured Query Language (SQL) as its primary language for interacting with data, allowing for efficient querying, updating, and management of large datasets..

Development environment

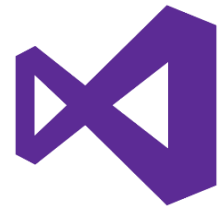

1. Visual Studio Code

Visual Studio Code in contrast, is a lightweight, open-source code editor developed by Microsoft. Designed for flexibility, VS Code is highly customizable, supporting multiple programming languages and offering a vast library of extensions. Its speed and support for a wide range of languages and tools make it ideal for web and software development. In this project, VS Code was employed on the **front-end**, where its adaptability and rich feature set streamlined the development of responsive and interactive user interfaces.

2. Microsoft Visual Studio

Microsoft Visual Studio is a full-featured Integrated Development Environment (IDE) primarily used for building, debugging, and deploying applications across platforms. It supports various languages and frameworks, especially those in the Microsoft ecosystem, such as C#, .NET, and ASP.NET. Visual Studio is ideal for large-scale projects and enterprise-level applications, providing comprehensive tools for code profiling, testing, and cloud integration. In this project, Visual Studio was utilized on the **back-end** to develop, manage, and deploy server-side components, enabling robust performance and scalability.

Code Tracking

1. GitHub

GitHub is a cloud-based platform that uses Git for version control and provides additional tools to facilitate collaboration on software projects. GitHub allows developers to store and manage their code in repositories, which can be public (open to everyone) or private. It also offers features for collaboration, such as pull requests, issues, and code review, making it popular for open-source projects and professional development.

2. Git

Git is a distributed version control system that tracks changes in source code during software development. It enables multiple developers to collaborate on a project by managing different versions of files.

CHAPTER 3

METHODOLOGY

3.1 Introduction

In this chapter, the implementation of the proposed system and the methodology followed are described. The details of this description include a software implementation.

In the process of developing a website that provides a set of services, this project relied on the (Waterfall) methodology to ensure that the specified goals are achieved efficiently. This methodology facilitates the development and maintenance process, as the project was divided into smaller units that can be easily managed and tested.

3.2 Analysis and Design

A comprehensive analysis of user requirements was conducted by interviewing a large number of beneficiaries. The results showed that users needed a simple and easy-to-use user interface and a quick way to access services.

Accordingly, the site structure was designed using Wireframes, which helped visualize the user flow and distribution of elements. The design includes a context diagram (block diagram), a use case diagram, an ERD model, and a database diagram.

3.2.1 Context diagram (Block diagram)

Context diagram is a type of data flow diagram, a method used to visualize the flow of information between the system and the external entities that interact with it.

- System: It is the central entity that is analyzed or designed, and is referred to in the project as the (My Services) website. As shown in Figure 3.1 Context diagram
- External entities: They are entities outside the system that interact with it, which include: administrator, service providers, and customers.
- Create: Addition is possible, but within certain limits, with the administrator obtaining full creation privileges.
- Login: Everyone can log in, including supervisors, service providers, and customers.
- Logout: Everyone can log out.
- Show: It displays all services and products to everyone and displays the service provider's data and statistics of his products and services only and displays all of the above to supervisors.

- Add, delete, and update: The service provider can add, delete, and update information about his products and services only, and the supervisor can use this function in most of the site's affairs.
- Registration: Administrator can add accounts, set permissions and assign service providers.
- Password reset: Only administrator can modify password.

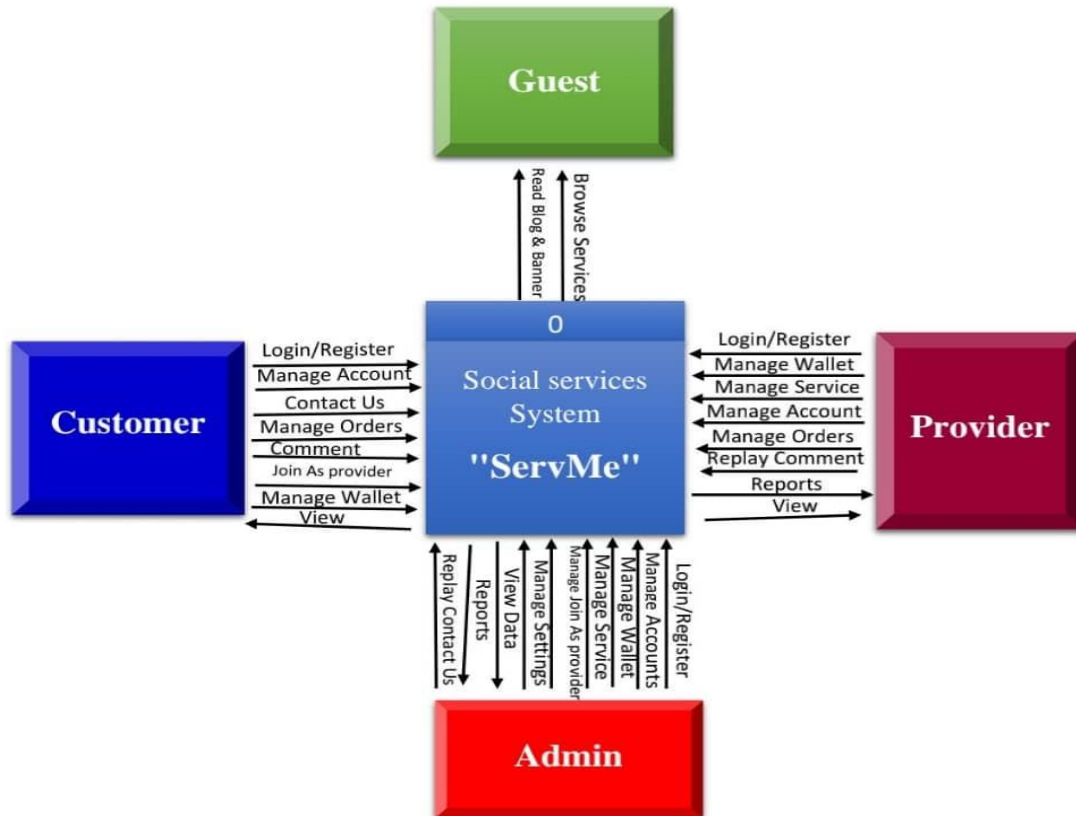

Figure 3. 1 Context Diagram

3.2.2 Use case diagram

This diagram illustrates the administrative structure of an application that includes a set of core functions managed by the Admin. The system starts with user registration and login, followed by wallet management, services, blogs, and settings, as well as handling users and provider requests. It also includes features to reply to contact messages and manage banners, cities, and categories.

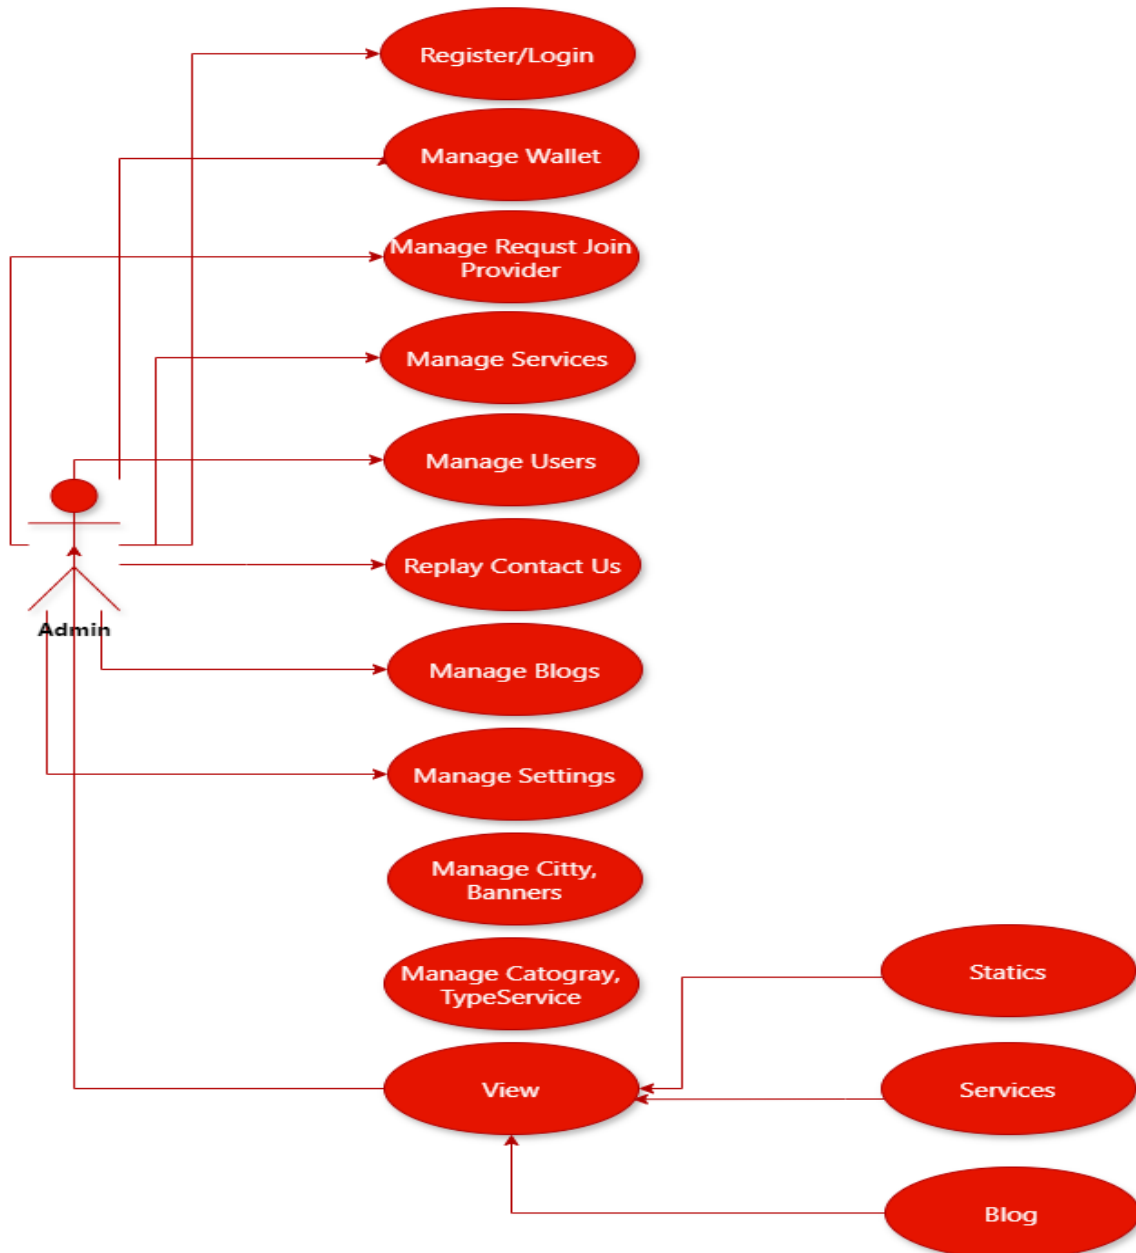

Figure 3. 2 Use case diagram (Admin)

This diagram presents the core functionalities available to the service provider within the system. These include login, account and wallet management, order tracking, and managing the services they offer. The provider can also reply to customer comments, contact support, and view various content such as statistics, services, search results, and blog posts.

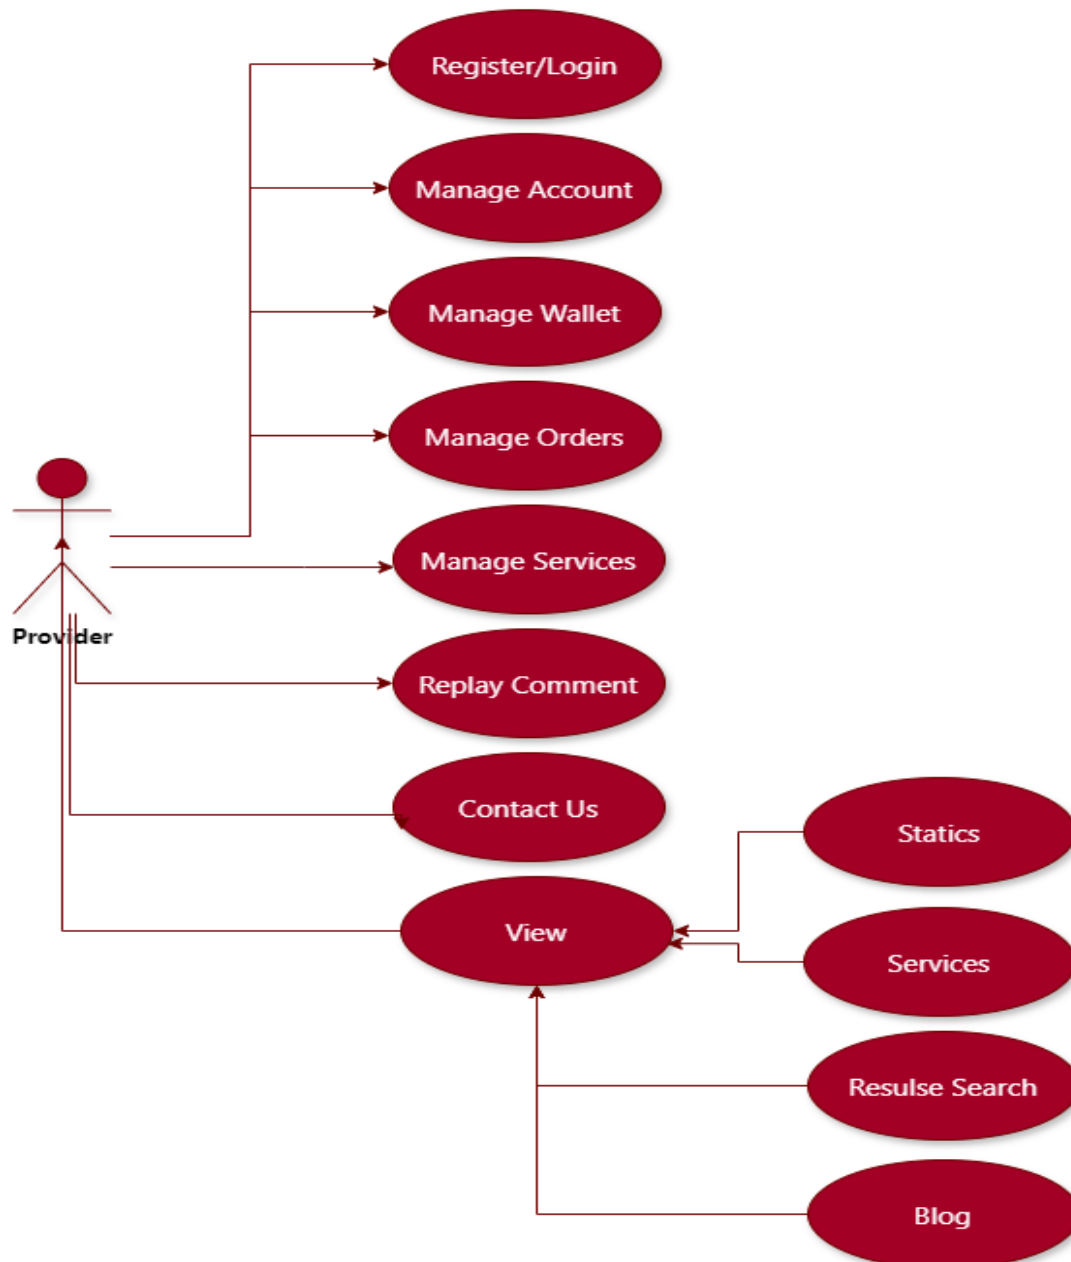

Figure 3. 3 Use case diagram (Provider)

This diagram illustrates the main use cases for the system's user (Customer), including functions such as registration and login, account and wallet management, order tracking, commenting on services, and requesting to join as a service provider. The user can also interact with platform content such as blogs, services, and search results.

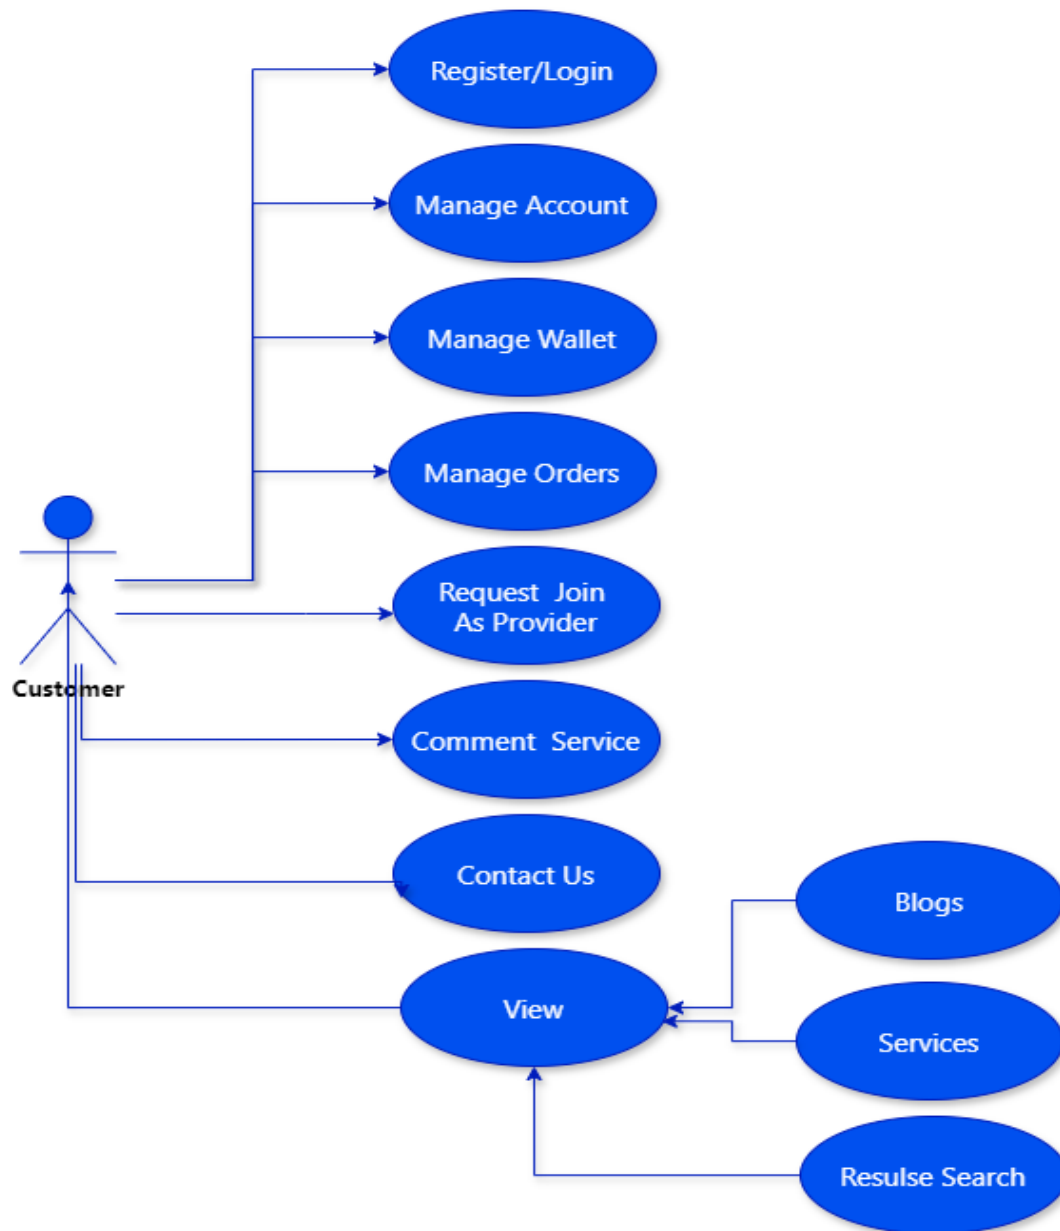

Figure 3. 4 Use case diagram (Customer)

system. A guest can browse available services and read blogs and banners without logging in. This highlights the publicly accessible features that help introduce users to the platform before account registration.

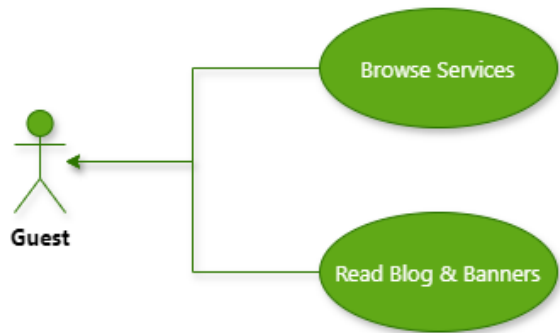

Figure 3. 5 Use case diagram (Gusset)

Entity Relationship Diagram Model (ERD Model) illustrates the relationships between entities and relationships within a specific system. This is done by graphically representing these entities and relationships. As shown in Figure 3. 6 ERD model.

3.2.4 Database Diagram

Database Diagram is a graphical representation of the relationships and interactions between database tables and their primary relationships. As shown in Figure 3.7 Databases diagram:

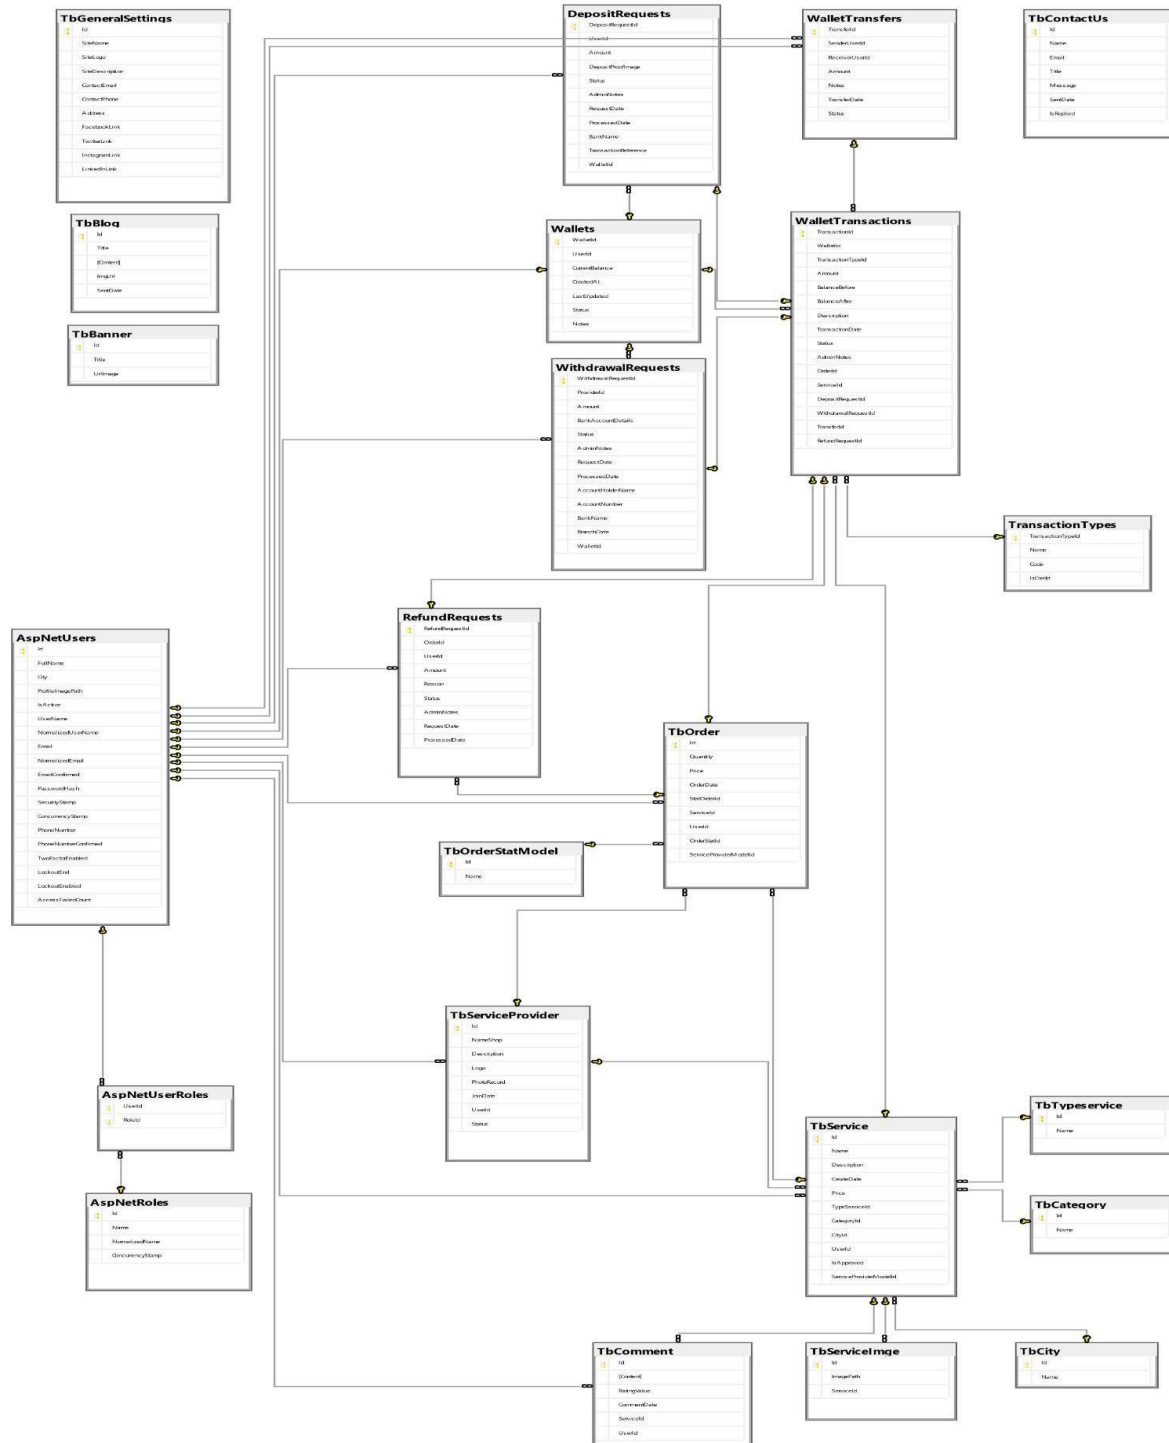

Figure 3.7 Database diagram

3.2.5 Database dictionary

This section describes the tables that are linked to the project. These Seventeen tables is described in the following point:

- AspNetRoles
- AspNetUsers
- DepositRequests
- RefundRequests
- TbBanner
- TbBlog
- TbCategory
- TbCity
- TbComment
- TbContactUs
- TbGeneralSettings
- TbOrder
- TbOrderStatModel
- TbService
- TbServiceImge
- TbServiceProvider
- TbTypeservice
- TransactionTypes
- Wallets
- WalletTransactions
- WalletTransfers
- WithdrawalRequests

AspNetRoles

Stores role definitions for users, such as Admin, Customer, or Service Provider.

Field Name	Data Type	Key
Id	Int	Primary Key
Name	Varchar(500)	
NormalizedName	Varchar(500)	
ConcurrencyStamp	Varchar(255)	

Table 1 AspNetRoles Table

AspNetUserRoles

Holds the main user id and role id.

Field Name	Data Type	Key
UserId	Int	Foreign Key
RoleId	Int	Foreign Key

Table 2 AspNetUsersRoles Table

AspNetUsers

Holds the main user account data including login credentials and profile information.

Field Name	Data Type	Key
Id	Int	Primary Key
FullName	Varchar(500)	
City	Varchar(255)	
ProfileImagePath	Varchar(500)	
IsActive	Boolean	
UserName	Varchar(500)

NormalizedEmail	Varchar(255)	
EmailConfirmed	Varchar(255)	
PasswordHash	Varchar(255)	
SecurityStamp	Varchar(255)	
ConcurrencyStamp	Varchar(255)	
PhoneNumber	Varchar(20)	
PhoneNumberConfirmed	Boolean	
TwoFactorEnabled	Boolean	
LockoutEnd	Varchar(255)	
LockoutEnabled	Boolean	
AccessFailedCount	Varchar(255)	

Table 3 AspNetUsers Table

DepositRequests

Logs user-initiated deposit transactions including amount, proof, and status

Field Name	Data Type	Key
DepositRequestsId	Int	Primary Key
UserId	Varchar(255)	
Amount	Int	
DepositProffimage	Varchar(255)	
StatusId	Int	Foreign Key
RequesDate	Date	
ProcessedDate	Date	
TransactionReference	Int	
WalletId	Int	Foreign Key

Table 4 DepositRequests Table

RefundRequests

Tracks refund requests linked to orders, including status and admin notes.

Field Name	Data Type	Key
RefundRequestId	Int	Foreign Key
OrderId	Int	Foreign Key
UserId	Int	Foreign Key
Amount	Decimal	
Reason	Varchar(255)	
Status	Boolean	
AdminNotes	Varchar(255)	
RequestDate	Date	
ProcessedDate	Date	

Table 5 RefundRequests Table

TbBanner

Contains banner image data used for homepage sliders or promotional content.

Field Name	Data Type	Key
Id	Int	Primary Key
Title	Varchar(500)	
UrlImage	Varchar(500)	

Table 6 TbBanner Table

TbBlog

Stores blog articles with titles, content, and related images.

Field Name	Data Type	Key
Id	Int	Primary Key
Title	Varchar(500)	
[Content]	Varchar(255)	
ImgUrl	Varchar(500)	
SentDate	Date	

Table 7 TbBlog Table

TbCategory

Defines service or product categories to help users filter or search more effectively.

Field Name	Data Type	Key
Id	Int	Primary Key
Name	Varchar(500)	

Table 8 TbCategory Table

TbCity

Holds city names for filtering services or user profiles based on location.

Field Name	Data Type	Key
Id	Int	Primary Key
Name	Varchar(500)	

Table 9 TbCity Table

TbComment

Captures user comments or reviews on services, including ratings and timestamps.

Field Name	Data Type	Key
Id	Int	Primary Key
[Content]	Varchar(255)	
RatingValue	Varchar(255)	
CommentDate	Date	
ServiceId	Int	Foreign Key
UserId	Int	Foreign Key

Table 10 TbComment Table

TbContactUs

Stores messages from users sent through a “Contact Us” form, including reply status.

Field Name	Data Type	Key
Id	Int	Primary Key
Name	Varchar(500)	
Email	Varchar(255)	
Title	Varchar(500)	
Message	Varchar(255)	
SentDate	Date

UserId	Int	Foreign Key
Status	Boolean	

Table 17 TbServiceProvider Table

TbTypeservice

Specifies service types or classifications to categorize different offerings.

Field Name	Data Type	Key
Id	Int	Primary Key
Name	Varchar(500)	

Table 18 TbTypeservice Table

TransactionTypes

Defines types of financial transactions, e.g., deposit, withdrawal, refund.

Field Name	Data Type	Key
TransactionTypeId	Int	Foreign Key
Name	Varchar(500)	
Code	Varchar(50)	
IsCredit	Boolean	

Table 19 TransactionTypes Table

Wallets

Stores users' wallet balances, creation dates, and related metadata.

Field Name	Data Type	Key
WalletId	Int	Foreign Key
UserId	Int	Foreign Key
CurrentBalance	Decimal	
CreatedAt	Varchar(255)	
LastUpdated	Date	
Status	Boolean	
Notes	Varchar(255)	

Table 20 Wallets Table

WalletTransactions

Logs all wallet activities including credits, debits, and balance changes.

Field Name	Data Type	Key
TransactionId	Int	Foreign Key
WalletId	Int	Foreign Key
TransactionTypeId	Int	Foreign Key
Amount	Decimal	
BalanceBefore	Decimal	
BalanceAfter	Decimal	
Description	Varchar(500)

3.2.6 System functions

Admin Functions:

1. Login: Admin access to the system.
2. Manage Accounts: Create, edit, activate/deactivate customer and provider accounts.
3. Manage Roles: Assign user roles (e.g., Admin, Customer, Provider).
4. Manage Services: Approve, reject, or edit submitted services.
5. Manage Categories: Add, update, or remove service categories.
6. Manage Posts: Oversee and manage blogs and banner content.
7. Manage Orders: Monitor and manage order lifecycle and assignments.
8. Manage Comments: Moderate user reviews and ratings.
9. Process Transactions: Approve deposit, refund, and withdrawal requests.

10. View System Data: Access all system data for audit and review.
11. Generate Reports: Create reports on service usage, user activity, and financial transactions.

Provider Functions:

1. Login/Register: Allows providers to create an account or log in.
2. Register as Service Provider: Enables providers to register their services in the system.
3. Manage Services: Add, update, or delete offered services.
4. Manage Account: Update provider account details and profile image.
5. Confirm Orders: Accept or reject customer orders.
6. View Data: View order details, customer inquiries, and related feedback.
7. Withdraw Funds: Request fund withdrawals to their bank account.
8. Reports: Access reports related to service performance, orders, and transactions.

Customer Functions:

1. Login/Register: Allows customers to create an account or log in to the system.
2. Manage Account: Edit and update personal account information.
3. Submit Inquiries: Send inquiries or questions to service providers or administrators.
4. Manage Orders: Place, update, and track service orders.

5. Comment: Add reviews and comments on services or providers.
6. View Data: Browse and view available services, categories, posts, banners, and service provider details.
7. Wallet Management: View wallet balance and transaction history.
8. Request Refunds: Submit refund requests for orders.
9. Deposit Funds: Upload deposit proofs and add funds to the wallet.

Guest Functions:

1. Browse Services: View service listings without registration.
2. Read Blog Posts: Access blog articles shared on the platform.
3. View Banners: See promotional banners and site announcements.
4. View Categories and Cities: Explore services by category and location.

3.3 Implementation

This section focuses on the practical and technical aspects related to project implementation.

3.3.1 Page Login/Register page

A login and register page that allows users to create a new account or sign in to an existing one. It includes forms for entering personal details, such as email, password, and other required information.

Figure 3. 24 Contact-Us Page

3.3.7 Tourism-Services Page

The Tourism Services page provides visitors with an overview of all travel-related offerings available through the business.

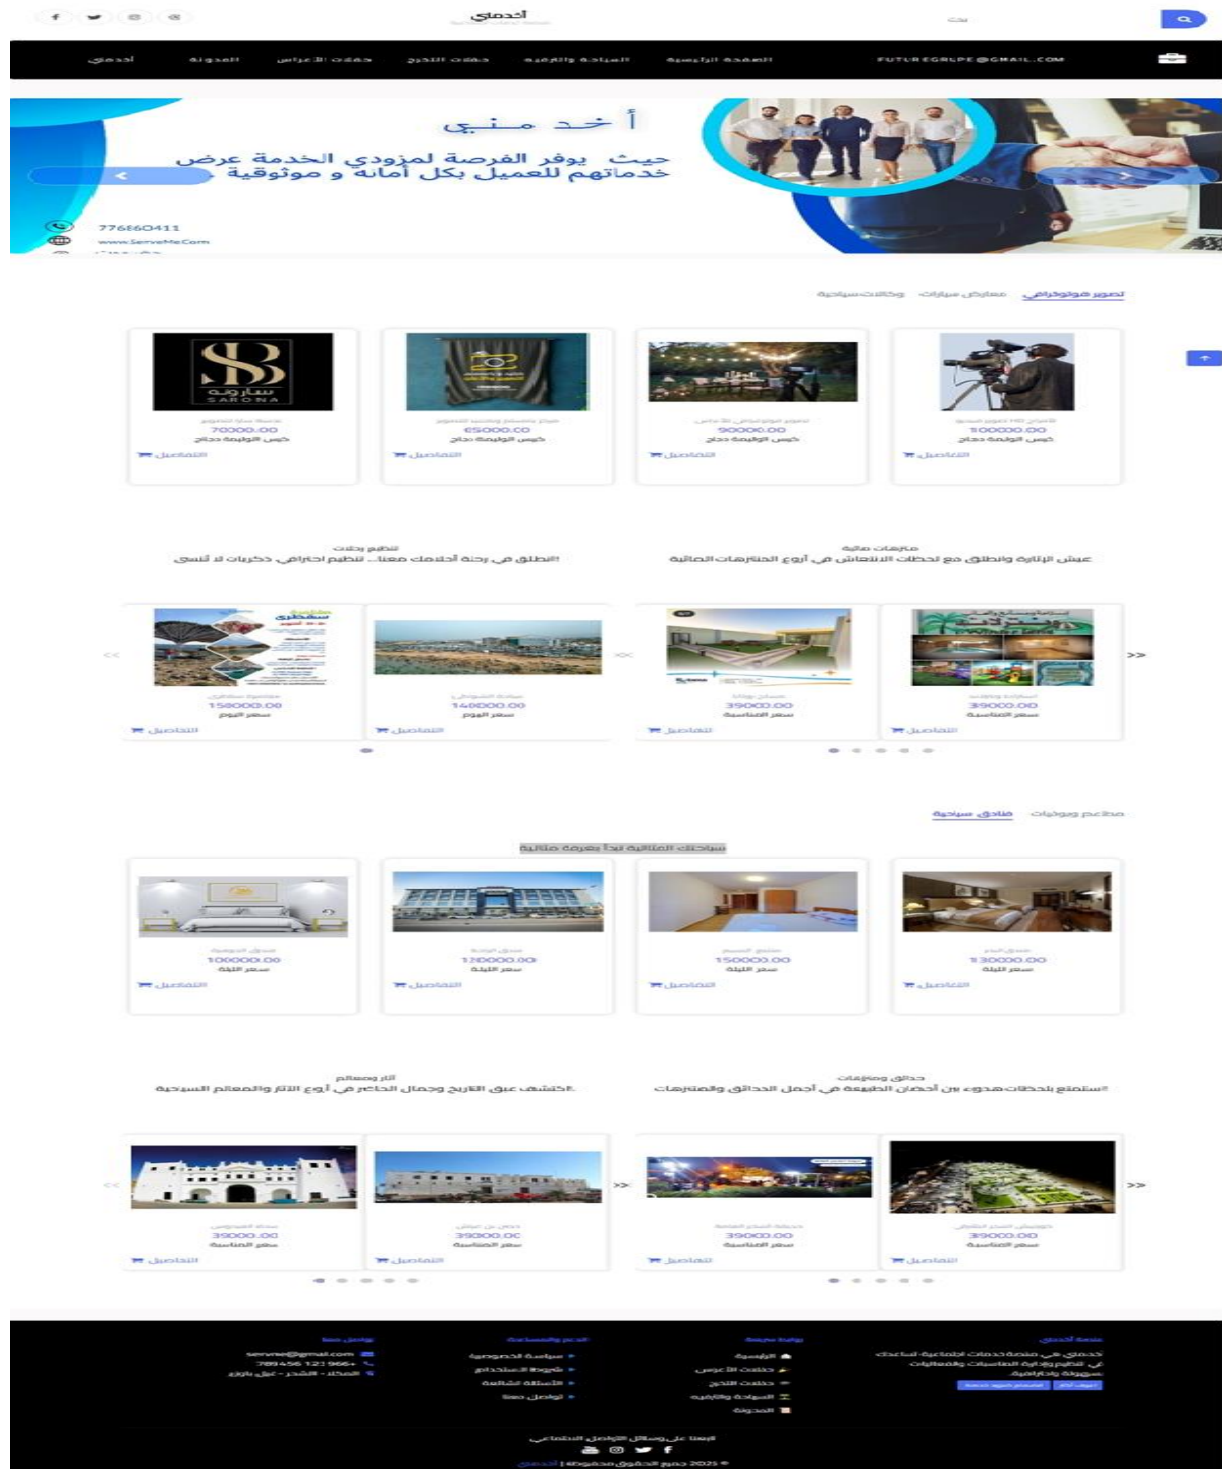

Figure 3. 25 Tourism-Services Page

The Graduation page serves as a central hub for all information related to commencement ceremonies and graduation celebrations.

3.3.7 Wedding-Services Page

The Wedding page is a beautifully designed section that shares all the important details about a couple's big day.

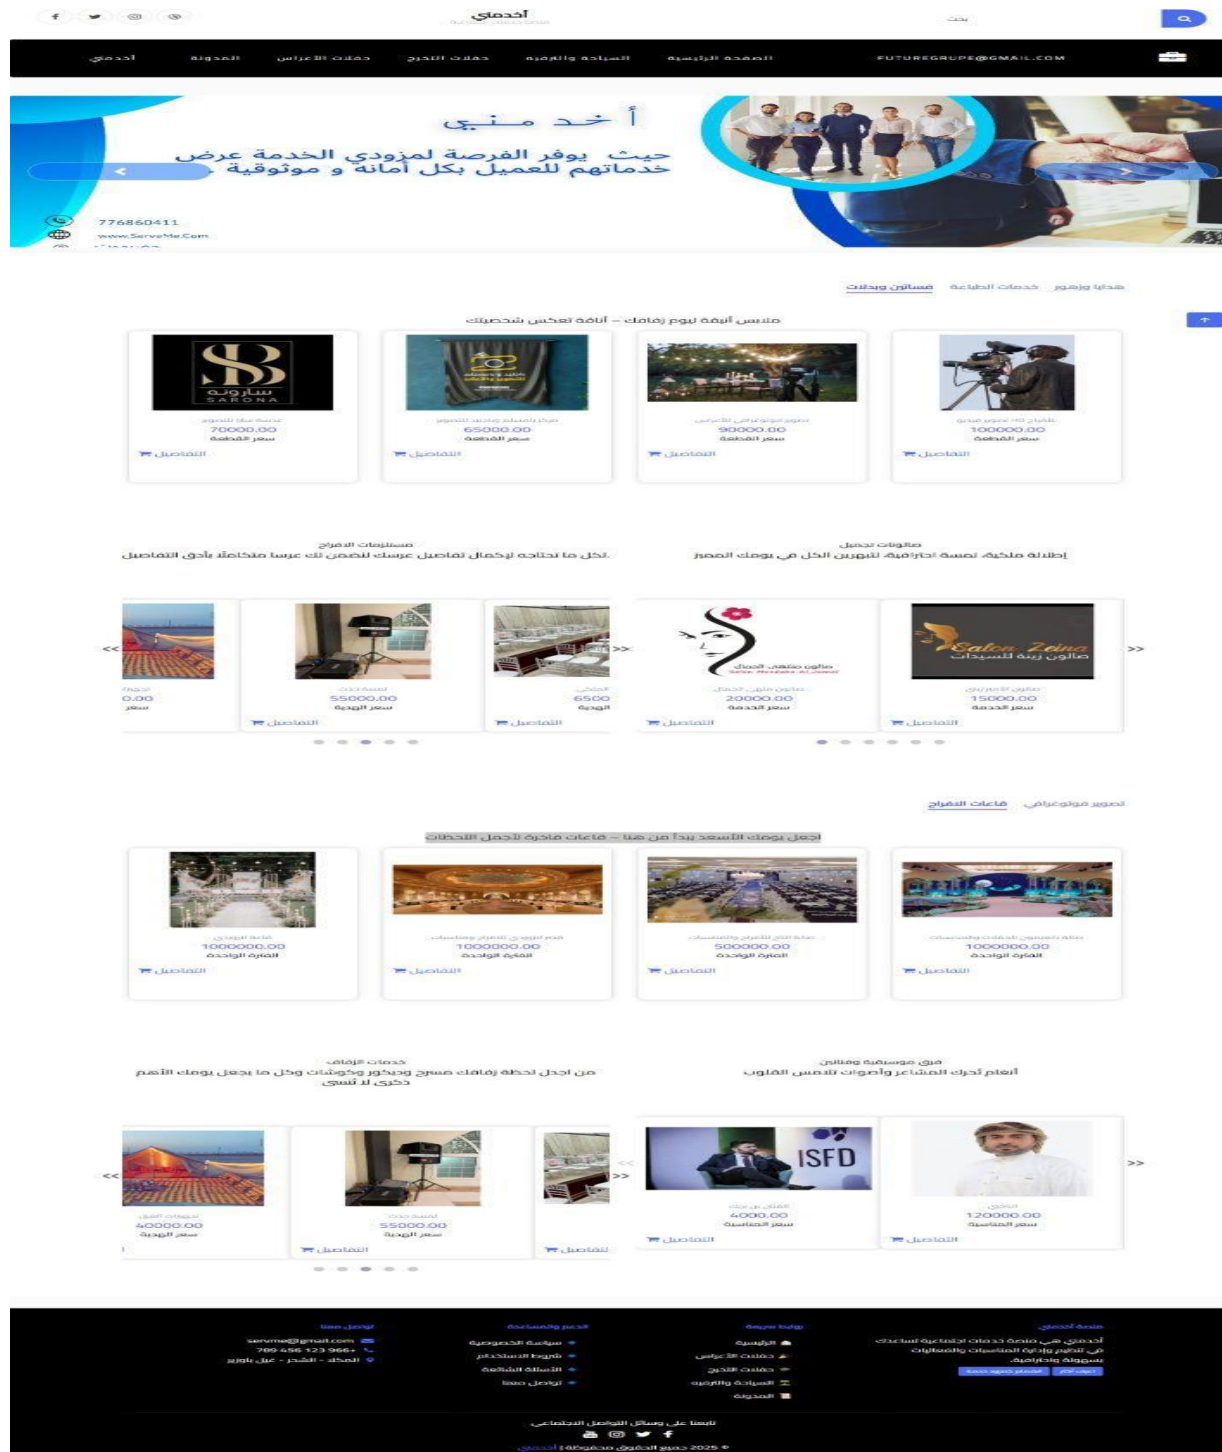

Figure 3. 27 Wedding-Services Page

3.3.8 Blogs page

A page that features a collection of informative and engaging articles related to the platform's services and user interests. It includes blog post previews with titles, images, and short summaries, allowing users to browse and select content to read in full.

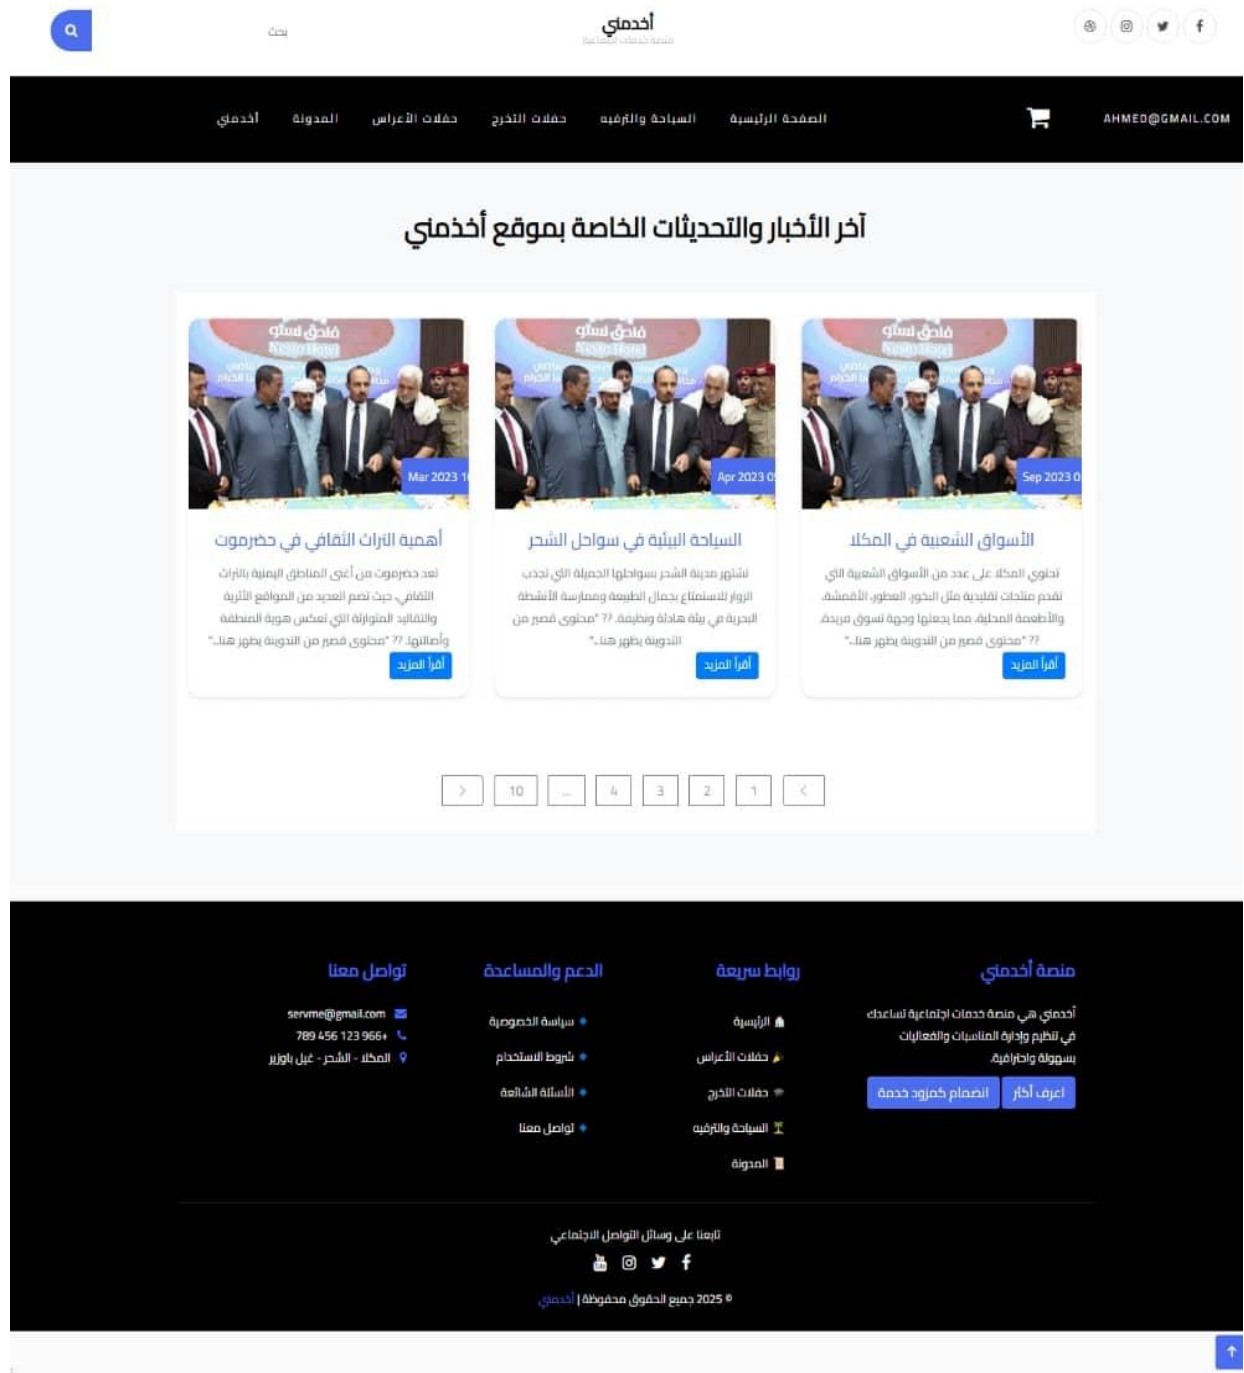

Figure 3. 28 Blog Page

3.3.9 Join-As-Service-Provider-Page Page

A registration page designed for individuals who want to offer their services on the platform. It includes a form to enter personal and professional details such as name, contact information, service category, and qualifications.

The screenshot displays the 'Join As Service Provider' registration page. The header is dark with a search bar and navigation links. The main content area is split into a white registration form on the left and a blue sidebar on the right. The form contains fields for merchant name, description, business license image, merchant logo, and a date of joining. The sidebar has a blue background with white text and a button. The footer is dark with white text and social media links.

Header: Search bar, navigation links (الرئيسية, السياحة والترفيه, حفلات الأعراس, حفلات التخرج, المدونة, أخدمتي), and user email (AHMED@GMAIL.COM).

Registration Form:

- اسم المتجر:** Text input field.
- وصف المتجر:** Text input field.
- صورة السجل التجاري:** Image upload field with 'No file chosen' and 'Choose File' buttons.
- شعار المتجر:** Image upload field with 'No file chosen' and 'Choose File' buttons.
- تاريخ الانضمام:** Date input field with a calendar icon.
- انضم:** Blue button.

Blue Sidebar:

- مرحبًا بك!**
- انضم كمزود خدمة وأبدأ في عرض خدماتك الآن عبر منصتنا.
- تسجيل الدخول**

Footer:

- اتصل معنا:** Email (serve@mail.com), Phone (789 456 123 966), Location (المسلة - الشجر - جبل بلوز).
- الدعم والمساعدة:** سياسة الخصوصية, شروط الاستخدام, الأسئلة الشائعة, اتصل معنا.
- روابط سريعة:** الرئيسية, حفلات الأعراس, حفلات التخرج, السياحة والترفيه, المدونة.
- منصة أخدمتي:** أخدمتي هي منصة خدمات اجتماعية تساعدك في تنظيم وإدارة المناسبات والفعاليات بسهولة وإدارة. Buttons: **انضم كمزود خدمة**, **اعرف أكثر**.

Bottom: Social media icons (YouTube, Instagram, Twitter, Facebook), copyright notice (© 2025 جميع الحقوق محفوظة | أخدمتي), and an upward arrow button.

Figure 3. 29 Join-As-Service-Provider-Page Page

3.3.10 Adding-New-Service Page

A functional page that allows registered service providers to list a new service on the platform. It includes a form to input service details such as title, description, city, category, pricing, and images.

The screenshot shows a web application interface for adding a new service. The main content area is titled "إضافة خدمة جديدة" (Add New Service). It contains a form with the following fields:

- عنوان الخدمة (Service Title): A text input field.
- وصف الخدمة (Service Description): A text area with a small image icon on the left.
- المدينة (City): A dropdown menu with "الشجر" (The Tree) selected.
- التصنيف (Category): A dropdown menu with "قاعات الافراح" (Wedding Halls) selected.
- نوع الخدمة (Service Type): A dropdown menu with "بيع" (Sell) selected.
- سعر الخدمة (Service Price): A text input field.
- صور الخدمة (اختيار 3 صور) (Service Images (Choose 3 Images)): A file upload section with "No file chosen" and "Choose Files" buttons.

At the bottom right of the form is a blue button labeled "إرسال الخدمة" (Send Service). On the right side of the page is a dark blue sidebar with the following navigation links:

- الإحصائيات (Statistics)
- إدارة الخدمات (Manage Services)
- المحفظة (Wallet)
- طلبات السحب (Withdrawal Requests)
- إدارة الطلبات (Manage Orders)
- التعليقات (Comments)
- إدارة الحساب (Account Management)

Figure 3. 30 Adding-New-Service Page

3.3.11 Request-for-Funds-Deposit Page

A secure page where users can request to deposit funds into their account on the platform. It includes fields for entering the deposit amount, preferred payment method, and any necessary transaction details.

Figure 3. 31 Request-for-Funds-Deposit Page

3.3.12 Account-Balance-Transactions Page

A user dashboard page that displays current account balance and a detailed history of all financial transactions.

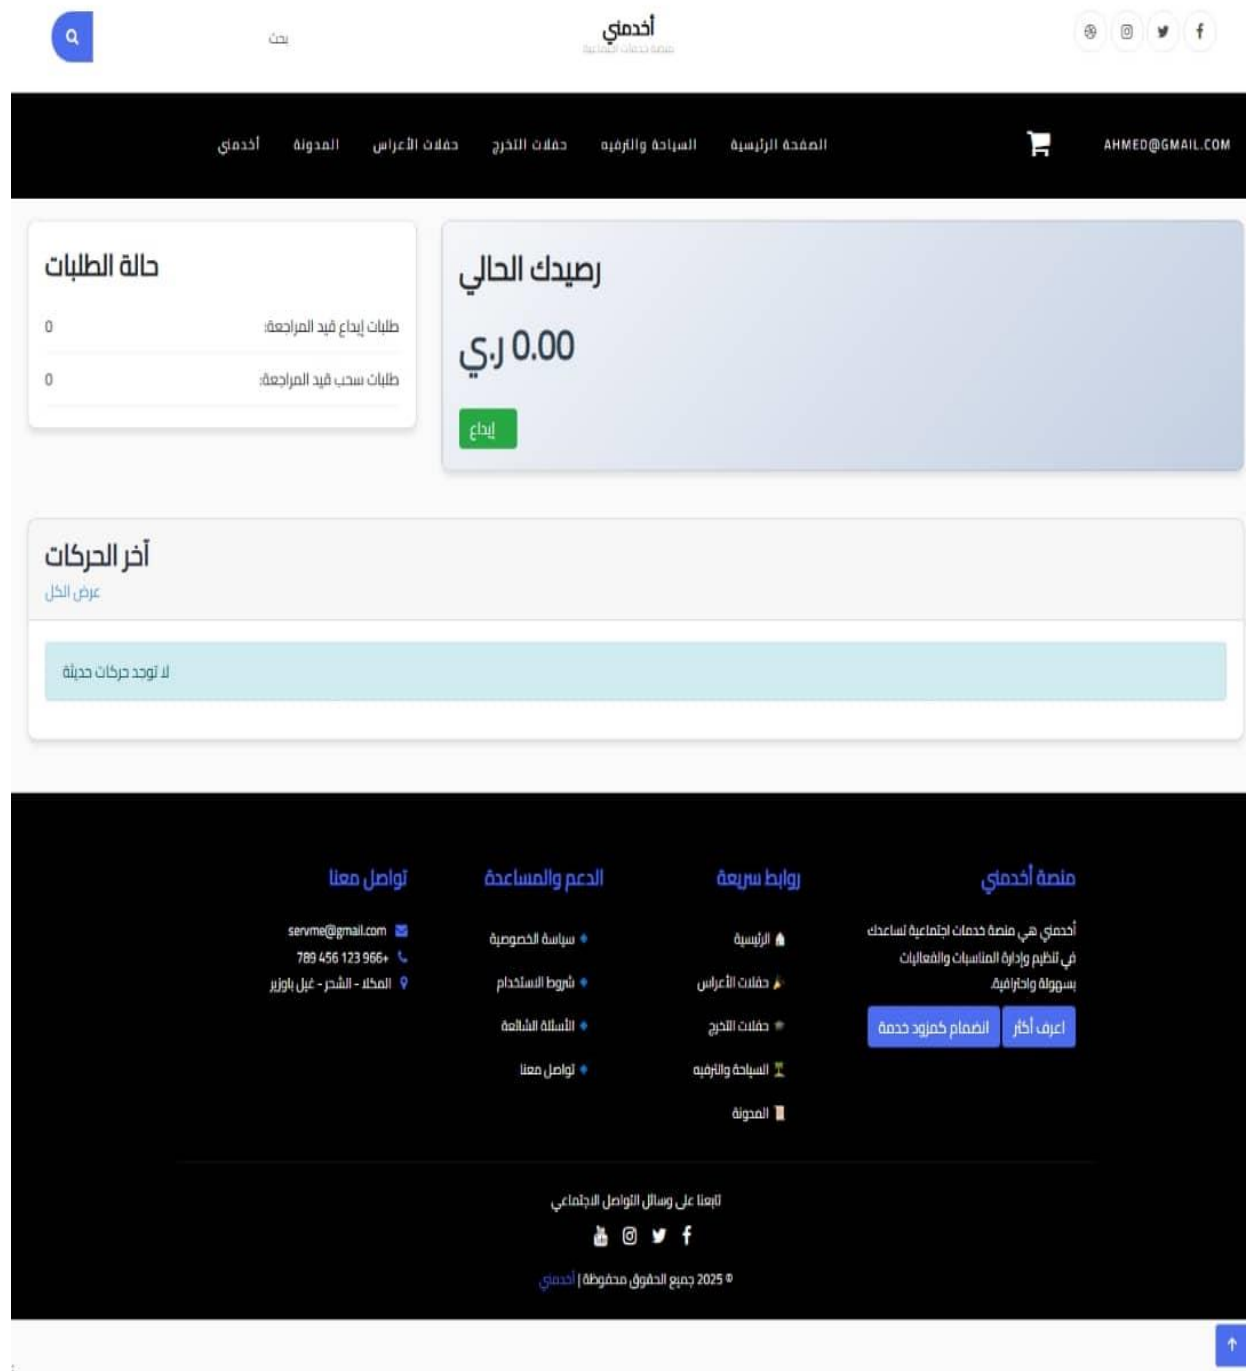

Figure 3. 32 Account-Balance-Transactions Page

3.3.1 (Technology Stack Selection)

HTML and CSS technologies were chosen for front-end development due to their simplicity and flexibility in page design, while C# was used as the programming language due to its power and ease of use in web applications via the ASP.NET MVC framework.

3.3.2 (Frontend Development)

The front-end was designed using HTML5 to build the basic structure of the site, while CSS3 was used to create flexible and adaptable designs for different screens. JavaScript was also used to validate data entered in the registration form.

3.3.3 (Backend Development)

The back-end logic is built using ASP.NET MVC where requests are handled via Controllers that call Models to fetch data from the database. Login and user data is handled using Identity Framework to provide the necessary security.

3.3.4 (Database Management)

The database was created using SQL Server, where the Users table was designed to store user information such as name, email, and password using encryption to maintain security. A Services table was also created to store data of available services with fields that specify description and cost.

3.3.5 (System Testing)

A series of performance tests were run using JMeter to ensure that the site could handle multiple requests at the same time. Unit tests were also run on all major functions using NUnit to ensure that each module was working properly."

3.3.6 (Deployment)

The site was deployed to an IIS server using Visual Studio Deployment Tools. The site was confirmed to be connected to the live database and we verified that all basic functionality was working properly.

CHAPTER 4

CONCLUSION AND RECOMMENDATIONS

4.1 Conclusion

The development of the social services platform successfully addressed the challenges faced by consumers and service providers. The system streamlined the process of finding and offering services, reducing time and effort while enhancing accessibility and communication. By utilizing modern technologies, the platform provided an efficient, user-friendly experience that bridged the gap between service providers and their audience.

4.2 Recommendations

This project can be developed in future by several things, such as :

1. Develop native mobile apps for iOS and Android to improve accessibility and enable push notifications.
2. Add new categories and services (e.g., educational, healthcare, corporate services).
3. Integrate an advanced review and rating system allowing clients to leave detailed feedback and star ratings, with algorithms to rank providers by quality.
4. Use AI technologies to analyze user behavior and automatically suggest relevant services (recommendation system).
5. Add live chat functionality between clients and service providers for real-time communication.
6. Expand payment options to include credit cards, regional wallets, and cash-on-delivery.
7. Implement multi-channel notification system (email, SMS, in-app push) with automatic reminders.

8. Provide advanced reporting dashboards showing financial performance, booking trends, and customer satisfaction, with export options.
9. Introduce subscription models (monthly or yearly) for providers to unlock premium features (service promotion, search ranking boosts, detailed analytics).
10. Integrate with external services such as Google Maps for precise location data and CRM/ERP systems for enterprise clients.

الخلاصة

توفر المنصات الإلكترونية للخدمات الاجتماعية طريقة ملائمة لتوفير الوقت والجهد والمال من خلال تمكين المستهلكين من التسوق والحجز وإدارة المعاملات من منازلهم. ومع ذلك ، غالبا ما تواجه العائلات والأفراد جهودا مجزأة عند البحث عن خدمات مثل تخطيط الأحداث أو الأنشطة الترفيهية ، بينما يكافح مقدمو الخدمات لعرض عروضهم والوصول إلى جمهورهم. أدى عدم وجود منصة مخصصة تلبي هذه الاحتياجات إلى عدم الكفاءة في السوق.

ولحل هذه المشكلة، تم تحويل نظام التسوق والحجز التقليدي إلى منصة إلكترونية تستخدم ASP ولغات البرمجة الداعمة لإدارة الطلبات ومعالجتها في قواعد بيانات. وأدى هذا النظام إلى تحسين إمكانية الوصول، وتبسيط التواصل بين المستهلكين ومقدمي الخدمات، وتقليل الوقت والجهد اللازمين للتسويق التقليدي. بالإضافة إلى ذلك ، سمح باسترجاع المعاملات السابقة بسهولة ، مما خلق تجربة أكثر كفاءة وسهولة في الاستخدام لجميع الأطراف المعنية.

شهادة المشرف
